Pages 1 and 2:

1. Six views: diagrams and photographs of an origami design, demonstrating the steps to create the final model.

   - Diagram 1: Initial base structure of the origami piece.
   - Diagram 2: Intermediate stage, showing the first layer collapsed.
   - Diagram 3: Further stages of collapse, with layers being refined.
   - Diagram 4: Completion of the third layer, leading to the final model.
   - Diagram 5: Final model, showcasing the intricate folds and layers.

2. Description:

   - The model is created by折叠 (fold) and clustering layers of paper, resulting in a complex, symmetrical structure.
   - Each layer is carefully positioned to ensure the final model’s stability and aesthetic appeal.

3. The series of photos captures the transformation from an initial base to the final design, highlighting the precision required in origami creation.

4. The model emphasizes the principles of origami, such as symmetry, layering, and the use of creases to form complex shapes.
